

SOFT LINE

PATIENT LOG BOOK

This log book must be filled in at each new V Soft Line treatment. It is useful for your Physician to be informed about your previous V SoftLift treatments. This will guarantee maximum safety and avoid possible interaction between different products.

V Soft Line is a new natural lift without downtime. The treatment protocol has been developed by the Swedish InjectAcademy. The procedure takes about 30-60 minutes and is performed by placing absorbable fine threads with a needle into the subdermal tissue.

The thread is thinner than a hair and consists of polydioxanone (PDO) – utilised in surgery over the past 30 years. Duration of results can vary between one to two years.

The logo features a stylized blue 'V' on the left, followed by the words 'SOFT LINE' in a grey, italicized, sans-serif font.

RVL V SOFT LIFT AB
